# Standard Cover Lifter

## EZI-LIFT Part no.10/1376

The Didsbury **EZI-LIFT Standard Cover Lifter** with rigid handles is normally used in pairs where keyholes are offset for the centre line.

The manhole cover lifter is a safe and easy-to-use method of lifting and moving covers. Incorporating two sets of rollers at the end of the lifter, the EZI-LIFT locates either directly or through adaptor bars to the manhole cover keyholes.

The rollers serve as a fulcrum point when downward pressure is applied to the handle, lifting the cover with minimal effort to reduce the risk of back injury to the operators.

1 Use the EZI-LIFT inverted to break the seal of tight covers

2 Gently pull back the EZI-LIFT's to raise one edge of the cover

3 Slide back the cover on EZI-LIFT rollers

4 For extra large or very heavy covers, note the use of round bar to assist movement

5 Cover can now be fully removed

6 Turn the EZI-LIFT through 180° to slide the cover back into place to re seat

### Features

- Safe, one or two-man operation
- Lifts all Elkington Gatic Covers
- Lightweight for easy deployment and convenient storage
- Wide nylon rollers at fulcrum point provide stability
- Heel projection on lifters gives extra leverage to loosen tight or frozen covers prior to lifting
- Transfer adaptor bar part no.10/1508 and Standard (Stockport) remote keys part no.10/1445 for use when keyholes are not adjacent to the edge of the manhole cover
- Variety of remote keys and adaptor bars are available for a range of manhole cover types

**Overall Length:** 1170mm

**Weight:** 7 kg

**Adaptor Bar Overall Length:** 445mm

**Weight:** 6 kg
